## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 19-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Molinario in view of Harrison (USP 6,561,197) and Betrabet et al.

In regard to claims 19, 20, 22, 24, Molinario discloses a wig (fig. 1) comprising a cap (10) having an inside surface and a perimeter edge (at 18), the cap having a shape suitable for fitting on a human head, a first flexible fabric strip (18) affixed along said inside surface at the perimeter edge, a plurality of second flexible fabric strips (16) extending from the first strip (fig. 1), said first flexible fabric strip being made of elastic material (col. 2, lines 8, 9) and the second flexible fabric strips also being made of elastic material (Applicant is noted that the net 12 being made of elastic material and since the net comprises the second strips 16, the strips also being made of elastic material), each of the first and second strips inherently being stretchable end to end and side to side; a plurality of wefts hair (19) affixed directly onto the first and second strips. Molinario fails to show first and second strips being coated with an adhesive layer defining as a film of polysiloxane. Harrison discloses a similar wig and teaches a method of applying adhesive to an inner surface of the wig (col. 6, lines 51-67). Betrabet et al. disclose that it is known in the art to use polysiloxane adhesive to adhere articles

to the skin and hair because it can be peeled off with little or no pain and leaves no appreciable residue (col. 1, line 65 through col. 2, line 6). It would have been obvious to one having an ordinary skill in the art at the time the invention was made to employ adhesive such as polysiloxane as taught by Harrison and Betrabet et al into the cap of Nakamura et al in order to securely position the wig on the head of the user and also providing the wig to be peeled off with little or no pain and leave no appreciable residue. In regard to claim 23, Betrabet et al show the polysiloxane being a solvent free polysiloxane (col. 3, lines 24, 25). Regarding claim 21, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use between 100 and 300 g/m² polysiloxane coating, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

## Response to Arguments

Applicant has argued that Molinario fails to show the second flexible fabric strips being made of elastic material. This is not true, Molinario shows the net (12) being made of elastic material (col. 2, line 6) and the second fabric strips are part of the net, therefore, the second strips being made of elastic material as well.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robyn Doan whose telephone number is (571) 272-4711. The examiner can normally be reached on Mon-Fri 8:30-6:00.

Application/Control Number: 10/519,120 Page 4

Art Unit: 3732

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cris Rodriguez can be reached on (571) 272-4964. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
